

Challenging topics at GCSE

Information Sheet

NCP18-15

Overview

In many respects, the GCSE, first taught in autumn 2015 and examined in summer 2017, still feels new, and throws up new challenges for teachers and pupils alike. In 2017-2018 there was a Maths Hubs pilot project which explored ways of teaching those GCSE maths topics teachers found challenging to teach, and students found challenging to learn. In 2018-2019, this work will continue. Work Groups will explore effective ways of teaching some of these topics, both to address the immediate needs of the incoming KS4 pupils, but also, crucially, taking a longer-term view by considering development in KS3. The aim will be to get to grips with all the underpinning content of a topic, exploring misconceptions and effective pedagogical approaches for each element.

Who is this for?

Secondary school maths teachers and heads of department. Participants in the 2017-2018 Work Group are welcome to participate again.

What is involved?

Each Work Group will explore a single GCSE topic in depth, establishing what the issues are and what the common misconceptions are, how these might be addressed through activities and questioning which promote deeper thinking and how teaching in KS3 might be modified or utilised to improve understanding for this topic in KS4.

Intended Outcomes

- Teachers will hone their ability to analyse what it is about certain topics that makes them more challenging and be able to apply these analytical skills more widely in the curriculum.
- Through detailed study of one topic, teachers will develop a sharper understanding of what it means for teaching to be 'effective' and how this might be evaluated in class and through assessment in all its forms.
- Pupils in the participant teachers' classes will become more confident in their own skills and abilities, developing a deeper and more connected understanding of prior content thus enabling them to better tackle the challenging topics.

Challenging topics at GCSE

The wider context

Collectively, the network of Maths Hubs across England work on projects around national maths education priority areas. One of those priorities includes the phrase 'supporting schools and colleges to address the immediate challenge of teaching the 9-1 GCSE.' Each Maths Hub participating in a national project runs a local Work Group, where teachers come together over a period of time to work on areas defined by the project. All Work Groups are subject to a common evaluation process, which collectively provides a body of evidence on the project's outcomes. So, your participation in this Work Group will contribute to your own professional learning, and that of your school colleagues, as well as making a contribution to the improvement of maths education at a national level. This Work Group extends work started in all Maths Hubs in autumn 2016.

Expectations of participants and their schools

- Attend the Work Group sessions and carry out a series of follow up tasks within their own classrooms related to teaching the challenging topic being explored.
- Work with other members of their mathematics department, as appropriate to develop the teaching of the challenging topic.

What is involved?

- 4 x 1/2-day workshops spread over three terms
- Gap tasks between the workshops, allowing wider department participation in the professional development.
- As part of the professional development, there will be an evaluation process focussing on the impact of Work Group

Funding

There is no charge for teachers and schools to take part in this Work Group. All costs are met by Maths Hub funds

Who is leading the Work Group

Nick Mulligan – Tarleton Academy, South Ribble

When are the Work Group

Work Group 1 – 21/11/18

Work Group 2 – 30/1/18

Work Group 3 – March Date to be confirmed

Work Group 4 – July Date to be confirmed
